4 High-level Description of Research Project

This research project...

- ☒ uses observational data.
- ☒ uses *confidential* observational data.
- ☐ uses data generated via experiment or trial by the authors (in field or lab).
 - ☐ For lab experiments: The code to implement the experimental protocol (z-Tree, o-Tree etc) is included in the package.
 - ☐ A PDF copy of IRB approval is contained in the package.
 - ☐ A PDF document outlining the design of the experiment, including information on the selection and eligibility of participants is included.
 - ☐ A PDF copy of the instructions given to participants in both original language and an English translation is included.
- ☐ uses data generated via survey by the authors (in field or online)
 - ☐ The programs used to administer the survey (e.g. qualtrics survey file) are included.
 - ☐ A PDF copy of IRB approval is contained in the package.
 - ☐ A PDF of the original questionnaire(s) and information on the selection and eligibility of participants is included.
- ☐ is a simulation study: the data are generated by an algorithm.
- ☐ is a numerical illustration: no data are used but code is used to produce illustrative output (tables, figures)

5 Data description

For any data that cannot be provided as part of the replication package, please provide the following information as part of the README.

- {REQUIRED}

Please specify how long the data will be preserved in the restricted-access location.
- {REQUIRED}

Please provide affirmation of support for replication checks. – As per the [JPE policy](#), “In cases where data cannot be published in an openly accessible trusted data repository like the JPE dataverse, authors who have requested an exemption to publish them at the time of first submission must commit to preserving the data and code for a period of no less than five years following the publication of the paper. They should also provide reasonable assistance to requests for clarification and replication.”
- {REQUIRED}

Please provide a codebook for the data. – The codebook should at a minimum describe the variables obtained from the data source, in a manner that will let others verify that they have obtained a substantially similar dataset if successfully obtaining access to the data.

7 Analyzing Data and Code Files

7.0.1 File Paths Report

Generated on 2026-03-19T18:36:45.980

Warning: Our search on file path types is imperfect and incurs both type 1 and type 2 errors. We aim to strike a reasonable balance between both. The below table is therefore only indicative. Detailed listings can be found in the appendix to this report.

In this table we analyse all files which contain source code (not data and documentation), and we report the grand total of each type of filepath we encountered.

Please check and replace any windows filepaths with unix compliant paths, insofar as this is possible in your setup. (Notice that STATA allows / to be a filepath separator on a windows platform, hence this is a requirement for all STATA applications.)

Files Analyzed	Windows Paths	Unix Paths	Mixed Paths	Drive Letters (C:\ etc)

7.1 Code description

The author implements the replication using a SCons-based reproducible research pipeline, orchestrated through uv, which automatically runs the Python and Stata scripts needed to generate the paper's tables and results.

There are 36 `.do` scripts which generate the analysis data.

There are 10 `.do` and 2 `.py` scripts which generate the main tables.

There are 7 `.do` and 1 `.py` scripts which generate the main figures.

There are 16 `.do` and 1 `.py` scripts which generate the appendix tables.

There are 11 `.do` scripts which generate the appendix figures.

8 Replication

Replicator followed the below steps, there are missing files.

```
cp .env.example .env

export JMSLAB_EXE_STATA=stata-mp

stata
do source/lib/requirements.do
exit

uv sync
uv run python -m SCons -c

uv run python -m SCons
scons: Reading SConscript files ...
scons: done reading SConscript files.
scons: Building targets ...
scons: *** [datastore/raw/vdem/data/pre1900_dem.dta] Source `datastore/raw/vdem/orig/version10/V-Dem-CY-Full+Others-v10.dta' not found,
needed by target `datastore/raw/vdem/data/pre1900_dem.dta'.
scons: building terminated because of errors.
```

Replicator downloads datasource number 10 from the link in the author's README, and proceeds:

```
uv run python -m SCons
scons: Reading SConscript files ...
scons: done reading SConscript files.
scons: Building targets ...
build_stata(["datastore/raw/vdem/data/pre1900_dem.dta"], ["source/derived/01_events/02_create_pre1900_dem.do",

scons: *** [datastore/raw/vdem/data/pre1900_dem.dta] TargetNonexistenceError : The following target files do not exist after build:

scons: building terminated because of errors.
```

Reading the `02_create_pre1900_dem.log` shows:

```
variable country_text_id not found
```

This is likely because the wrong dataset was used. The link provided in the README to directly download database 10 is in fact a link to download database 9: the Standardized World Income Inequality Database. Replicator finds what he assumes to be the correct data source online, replaces it, and proceeds

```
uv run python -m SCons
scons: Reading SConscript files ...
scons: done reading SConscript files.
scons: Building targets ...
build_stata(["datastore/raw/vdem/data/pre1900_dem.dta"], ["source/derived/01_events/02_create_pre1900_dem.do",
"datastore/raw/vdem/orig/version10/V-Dem-CY-Full+Others-v10.dta"])
build_stata(["datastore/raw/crosswalks/valid_iso3_codes.dta"], ["source/derived/01_events/01_create_valid_iso3_codes.do",
```

```
"datastore/raw/vdem/orig/version10/V-Dem-CY-Full+0thers-v10.dta"]])
scons: *** [datastore/derived/events/regime_change.dta] Source `datastore/raw/regime_change/orig/ERT.csv' not found, needed by target
`datastore/derived/events/regime_change.dta'.
scons: building terminated because of errors.
```

Again, the replicator goes to find the right dataset and add it the the right path. And proceeds:

```
uv run python -m SCons
scons: Reading SConscript files ...
scons: done reading SConscript files.
scons: Building targets ...
scons: *** [datastore/derived/events/regime_change.dta] Source `datastore/raw/regime_change/orig/vod_democratizations.csv' not found,
needed by target `datastore/derived/events/regime_change.dta'.
scons: building terminated because of errors.
```

Again, there is a missing data file. The README link to this data source 10.2 is the same as 10.1.

Replication stop here; manually searching each raw input data set online is too time costly.

9 Findings

- It seems the majority of raw input files are missing from the package:

- Should the replication procedure involve manually downloading each publicly accessible datasource, then this would need to be specified in teh README and be accompanied with more specific instructions.
- Moreover data access links in the README are not consistent. E.g.
 - The link provided to directly download data source 10 is in fact a link for data source 9.
 - 10.2 and 10.1 have the same link.

Replicator recommends:

- Verifying all the raw, input data tables are included in the package, at the correct filepath with filenames matching those called in the scripts.
- Verifying that all the README datalinks direct to the correct online data sources.
- Renaming the README as per the JPE README naming convention. That is “Data and Code for: Title of Paper” or “Code for: Title of Paper”.
- Adding author name and affiliations to the README title – as per the JPE naming convention.
- Including an explicit section for the Data Availability and Provenance Statements. Notably the Statement About Rights Part 1 and Statement About Rights Part 2.
- Making the “Setup” section an explicit “Instructions for Replicators” section.

9.1 Data Preparation Code

None of the analysis data was successfully derived.

9.2 Tables and Figures

None of the tables or figures were replicated.

9.3 In-Text Numbers

- ☒ In-text numbers not verified.
- ☐ There are no in-text numbers, or all in-text numbers stem from tables and figures.
- ☐ There are in-text numbers, but they are not identified in the code

10 Classification

- ☐ full reproduction
- ☐ full reproduction with minor issues
- ☐ partial reproduction (see above)
- ☒ not able to reproduce most or all of the results (reasons see above)

10.1 Reason for incomplete reproducibility

- ☐ None.
- ☐ **Discrepancy in output** (either figures or numbers in tables or text differ)
- ☐ **Bugs in code** that were fixable by the replicator (but should be fixed in the final deposit)
- ☐ **Code missing**, in particular if it prevented the replicator from completing the reproducibility check
- ☐ **Data preparation code missing** should be checked if the code missing seems to be data preparation code
- ☐ **Code not functional** is more severe than a simple bug: it prevented the replicator from completing the reproducibility check
- ☐ **Software not available to replicator** may happen for a variety of reasons, but in particular (a) when the software is commercial, and the replicator does not have access to a licensed copy, or (b) the software is open-source, but a specific version required to conduct the reproducibility check is not available.
- ☐ **Insufficient time available to replicator** is applicable when (a) running the code would take weeks or more (b) running the code might take less time if sufficient compute resources were to be brought to bear, but no such resources can be accessed in a timely fashion (c) the replication package is very complex, and following all (manual and scripted) steps would take too long.
- ☒ **Data missing** is marked when data *should* be available, but was erroneously not provided, or is not accessible via the procedures described in the replication package
- ☐ **Data not available** is marked when data requires additional access steps, for instance purchase or application procedure.
- ☐ **Missing README** is marked if there is no README to guide the replicator, or the README is not in compliance with JPE requirements
